Zens Desk Management System

Zens Desk Management System (DMS) is an innovative solution that combines smart wireless charging with real-time monitoring of workspace occupancy. The system is especially designed to make modern workspaces more efficient, attractive and sustainable.

With Zens DMS, you save costs while improving the workspace experience with insights into workspace utilisation.

What does Zens DMS offer?

Enhanced workspace experience

Create a tidy and efficient workspace with wireless charging. No more cables, but an environment that promotes focus and productivity.

Increased productivity

Less stress from charged devices and better workspace design contribute to a more productive and vital working environment.

Sustainability

Support sustainability goals by reducing e-waste and energy consumption.

Attract and retain talent

An attractive, modern workspace helps you attract and retain the best employees.

Visual feedback

The Smart PuK Visual's LED ring provides clear visual cues that support cleaners to work more efficiently. In addition, the LED ring subtly encourages users to stay active by means of a visual indication.

Cost reduction

Cut costs with real-time data on workspace occupancy. Optimise space utilisation and cleaning schedules, saving up to 50% on cleaning costs.

Data-driven decision-making

Gain insights into how your office space is being used. Based on this data, you can make better decisions on space planning and resource allocation.

Flexibility and integration

Use Zens DMS as a stand-alone solution or integrate it with your existing smart building platform or workspace reservation tool.

Secure and worry-free connectivity

Thanks to Narrow Band-IoT technology, the system operates completely independently of your IT or WiFi network. This guarantees a secure, reliable connection.

Zens DMS consists of:

Hardware

All products are compatible with Qi devices, such as phones, earpods and mice, and are equipped with motion sensors.

- Smart PuK Visual: Specially designed for individual workspaces.
- Smart PuK Meeting Room: Ideal for use in meeting rooms.
- Smart PuK Visual Magnetic: A magnetic version.
- Smart PuK Combi: Charge your laptop and device at the same time.

Software (SaaS)

- Zens Dashboard: real-time insights into workspace utilisation.
- Zens Cloud: For secure data storage and communication.
- Optional API: For integration with external smart building platforms and/or workspace reservation tools.

Services

- Digital set-up: Interactive floor plans in your Zens Dashboard.
- Training and support: Virtual training and second-line support on working days.
- **Zens Smart Care:** Maintenance service with updates and checks 1-2 times a year.
- **Zens Workspace Consultancy:** Advice based on workspace data to save costs and optimise space.

Zens DMS has been applied to, among others:
